

HKTVMall Replaces Plastic Packaging With Honeycomb Cushion

As an online shopping mall, HKTVMall sells a large portion of products that are packed and shipped by merchants. Therefore, HKTVMall introduces the honeycomb cushion, a reusable and recyclable packaging material, to further reduce plastic packaging, spreading the message of environmental protection to everyone to bring positive impacts to our community.

Honeycomb cushions can be turned into packaging bags in different sizes and protective sleeves, replacing plastic packaging like air column bags, bubble wrap, etc. The unique protective structure of honeycomb cushions can provide solid protection to products such as glass bottles, fragile items, etc. during the shipping process.
